<b>Target version:</b>	4.0		
<b>Affects version:</b>	4.0		
<b>Description</b>			
The song info window of the Qt UI could be made into a much more useful tag editor with some improvements.			
Some ideas:			
<ol style="list-style-type: none"><li>1. Make field values editable with a single click; the current behavior ("click twice slowly") is awkward</li><li>2. Allow navigating between fields with the Up and Down arrow keys while editing</li><li>3. Enable the "Save" button only when changes are made, and disable again once successfully saved</li><li>4. Add a "Revert" button to go back to on-disk values, and enable/disable with the "Save" button</li><li>5. Display unsaved changes in bold text until saved</li></ol>			
Bonus goal -- allow displaying/editing tags of multiple files at once (by selecting multiple files before pressing Alt-I):			
<ul style="list-style-type: none"><li>• We could do a cool stack/overlay of multiple album art images in place of the single image display</li><li>• The path label could just display something like "8 files selected"</li><li>• Set the text of the "Save" button to "Save 8 files" just to be extra clear</li><li>• Fields that were identical between all tags would be displayed and editable like normal</li><li>• Fields that differed between tags should be display disabled text like "Various; press Delete to clear all"</li><li>• Pressing the Delete key would clear the existing, different values and allow editing those fields</li></ul>			

### History

#1 - November 23, 2019 07:31 - John Lindgren

- % Done changed from 0 to 100
- Target version set to 4.0
- Status changed from New to Closed

The basic features are all implemented in master (not all of the eye candy is).
