Description

The only way to install audacious 4.0 is through the tar.bz2 packages which requires a PhD in Computer Science to install. Also the latest available packages on the apt repository are from the Byzantine era. So it's shocking that there isn't any alternative way to install. Hence request for Flathub and Snap.

History

#1 - April 06, 2020 19:26 - John Lindgren

- Target version deleted (4.0.1)

If you're too impatient to wait for an official package from your distribution, and too busy to create one for yourself, you could find a PPA and install Audacious from there.

Being shocked when someone else hasn't done the work for you, for free, isn't likely to get you very far though.

#2 - April 06, 2020 19:27 - John Lindgren

- Tracker changed from Feature to Support

#3 - April 06, 2020 19:46 - Ariadne Conill

Adding Audacious to flathub is on my todo, but it involves dealing with flatpak, so it is pretty far down the list.

Believe me I have tried a couple times during the last 3 months.

https://launchpad.net/~nilarimogard/+archive/ubuntu/webupd8

The latest version available on webupd8 is currently **3.10**, I couldn't find **4.0.1** anywhere.

So I followed the instructions from the **INSTALL** file in the **audacious-4.0.1.tar.bz2** package (ran ./configure* and then make), which broke the previous install and it's not launching anymore**.

So is the INSTALL file giving the thorough instructions?

- When I run ./configure i get the following results in the end:

```
D-Bus support:                     yes
GTK+ support:                      no
Qt support:                        yes
```

```
    Valgrind analysis support:               no
```

Should I install those separately and then run the *make* command? If so which versions of **GTK+** and **Valgrind** is required?

- I tried reinstalling both from *apt* and *webupd8* repos to no avail.

Tried it but I keep encountering the following error:
(I've tried running **apt --fix-broken** and **apt install -f** as well)

```
dpkg: error processing archive /var/cache/apt/archives/libaudqt5_4.0.1-1build1~ubuntu18.04_amd64.deb (--unpack
):
 trying to overwrite '/usr/lib/x86_64-linux-gnu/libaudqt.so.2', which is also in package libaudqt2:amd64 3.10-
1~webupd8~bionic0
Errors were encountered while processing:
 /var/cache/apt/archives/libaudqt5_4.0.1-1build1~ubuntu18.04_amd64.deb
E: Sub-process /usr/bin/dpkg returned an error code (1)
```

but looks like there are a lot dependency conflicts:

```
Check if you are using third party repositories. If so disable them, since they are a common source of problem
s.
Furthermore run the following command in a Terminal: apt-get install -f
Transaction failed: The package system is broken
 The following packages have unmet dependencies:

audacious-plugins: Depends: audacious-plugins-data (= 4.0-1build1~ubuntu18.04) but 4.0-1build1~ubuntu18.04 is
installed
                   Depends: libaudcore5 (>= 4.0-1build2~ubuntu18.04) but 4.0.1-1build1~ubuntu18.04 is installe
d
                   Depends: libaudqt5 but it is not installed
                   Depends: libavcodec-extra57 (>= 7:3.4.6) but it is not installed

                   Depends: libavutil55 (>= 7:3.4.6) but 7:3.4.6-0ubuntu0.18.04.1 is installed
                   Depends: libcdio-cdda2 (>= 10.2+0.94+2) but 10.2+0.94+2-2build1 is installed
                   Depends: libcurl3-gnutls (>= 7.16.2) but 7.58.0-2ubuntu3.8 is installed
                   Depends: libgcc1 (>= 1:3.0) but 1:8.4.0-1ubuntu1~18.04 is installed
                   Depends: libmodplug1 (>= 1:0.8.8.5) but 1:0.8.9.0-1 is installed
                   Depends: libqt5core5a (>= 5.9.0~beta) but 5.9.5+dfsg-0ubuntu2.5 is installed
                   Depends: libqt5gui5 (>= 5.3.0) but 5.9.5+dfsg-0ubuntu2.5 is installed
                   Depends: libqt5network5 (>= 5.0.2) but 5.9.5+dfsg-0ubuntu2.5 is installed
                   Depends: libqt5widgets5 (>= 5.4.0) but 5.9.5+dfsg-0ubuntu2.5 is installed
                   Depends: libstdc++6 (>= 5.2) but 8.4.0-1ubuntu1~18.04 is installed
                   Depends: libwavpack1 (>= 4.40.0) but 5.1.0-2ubuntu1.4 is installed
                   Depends: zlib1g (>= 1:1.1.4) but 1:1.2.11.dfsg-0ubuntu2 is installed
```

After this I removed all of the third party repos (webupd8 and ubuntuhandbook1), removed audacious, ran **apt autoremove** and **autoclean**, reinstalled **audacious** and **audacious-plugins** from the official repos and get the following error upon launch:

```
ERROR plugin-init.cc:156 [start_required]: No output plugin found.
(Did you forget to install audacious-plugins?)
Aborted (core dumped)
```

Nice! I've been using Debian-based systems for over a decade and I've never seen that one before.

I don't know what you've done to your system, but you might want to consider starting over from scratch at this point.

I installed from that PPA onto a Linux Mint system (Ubuntu 18.04 base) and had no dependency issues, but it sounds like it would be best for you to stick with the official repositories and just be patient until those are updated.

At this point I'm not able to run audacious at all, even the official versions (3.9)

> I don't know what you've done to your system, but you might want to consider starting over from scratch at this point.

By scratch you mean clean OS install?
The problem occurred exactly after I tried **./configure** and **make** based on the instructions provided in the **INSTALL** file, so perhaps, there must be some way to revert those specific changes without reverting all the changes (i.e. OS reinstall)?

Appreciate the help!

#10 - April 08, 2020 06:41 - John Lindgren

You could try ./configure and then "make uninstall", that should undo a previous "make install".

#11 - April 10, 2020 05:45 - Xashyar X

John Lindgren wrote:

Thanks, **make uninstall** did resolve the issue and now I've successfully installed 4.0.1 from ubuntuhandbook1 repo.

#12 - April 26, 2020 13:57 - Artem Tim

Good day. I've build initial Flatpak package. All works and almost all plugins built and works. Here https://github.com/flathub/flathub/pull/1470 Expect upstream involment, hope this could interested you.

#13 - October 24, 2020 00:41 - John Lindgren

- Status changed from New to Closed

Flathub has Audacious now so it looks like we can close this. Thanks to all who worked on it!
