Affects version:	4.0.3		
Description			
Hello guys, I'm forever grateful for your efforts to create a platform for GNU/Linux which equaled and I think surpassed winamp in terms of functionality, but please for the love of everything nice fix the search option (the J hotkey) or point me to a solution or a workaraound to search for songs in a playlist, because it's been really a terrible, terrible loss for me personally, and I doubt I'm the only one.
